

# Impinj Inc.

## TEST REPORT FOR

### Speedway Revolution IPJ-REV-R220

#### Tested to The Following Standards:

FCC Part 15 Subpart C Section(s)

15.207 & 15.247  
(FHSS 902-928 MHz)

Report No.: 101403-2

Date of issue: August 16, 2018

Test Certificate # 803.05

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

## ADMINISTRATIVE INFORMATION

### Test Report Information

**REPORT PREPARED FOR:**

Impinj Inc.  
400 Fairview Ave. N  
Suite 1200  
Seattle, WA 98109

Representative: Greg Robinson  
Customer Reference Number: 701820

**DATE OF EQUIPMENT RECEIPT:****DATE(S) OF TESTING:****REPORT PREPARED BY:**

Terri Rayle  
CKC Laboratories, Inc.  
5046 Sierra Pines Drive  
Mariposa, CA 95338

Project Number: 101403

August 11, 2018

August 11, 2018

### Report Authorization

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the equipment provided by the client, tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

A handwritten signature in black ink, reading "Steve Behm", is positioned above a horizontal line.

**Steve Behm**  
**Director of Quality Assurance & Engineering Services**  
**CKC Laboratories, Inc.**

## Test Facility Information

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable and affordable test results.

TEST LOCATION(S):  
CKC Laboratories, Inc.  
22116 23rd Drive S.E., Suite A  
Canyon Park, Bothell, WA 98021

## Software Versions

CKC Laboratories Proprietary Software	Version
EMITest Emissions	5.03.11

## Site Registration & Accreditation Information

Location	NIST CB #	TAIWAN	CANADA	FCC	JAPAN
Canyon Park Bothell, WA	US0081	SL2-IN-E-1145R	3082C-1	US1022	A-0148

## SUMMARY OF RESULTS

**Standard / Specification: FCC Part 15 Subpart C - 15.247 (FHSS 902-928MHz)**

Test Procedure	Description	Modifications	Results
15.247(a)(1)(i)	Occupied Bandwidth	NA	NP
15.247(a)(1)	Carrier Separation	NA	NP
15.247(a)(1)(i)	Number of Hopping Channels	NA	NP
15.247(a)(1)(i)	Average Time of Occupancy	NA	NP
15.247(b)(2)	Output Power	NA	NP
15.247(d)	RF Conducted Emissions & Band Edge	NA	NP
15.247(d)	Radiated Emissions & Band Edge	NA	Pass
15.207	AC Conducted Emissions	NA	NP

NA = Not Applicable

NP = CKC Laboratories was not contracted to perform test.

### ISO/IEC 17025 Decision Rule

The declaration of pass or fail herein is based upon assessment to the specification(s) listed above, including where applicable, assessment of measurement uncertainties. For performance related tests, equipment was monitored for specified criteria identified in that section of testing.

## Modifications During Testing

This list is a summary of the modifications made to the equipment during testing.

### Summary of Conditions

No modifications were made during testing.

**Modifications listed above must be incorporated into all production units.**

## Conditions During Testing

This list is a summary of the conditions noted to the equipment during testing.

### Summary of Conditions

None

## EQUIPMENT UNDER TEST (EUT)

During testing, numerous configurations may have been utilized. The configurations listed below support compliance to the standard(s) listed in the Summary of Results section.

### Configuration 1

#### *Equipment Tested:*

Device	Manufacturer	Model #	S/N
Speedway Revolution	Impinj Inc.	IPJ-REV-R220	37016201091
AC Adaptor	CUI, Inc.	SDI50-24-U	NA
Circular Polarized UHF Antenna	Times-7	SlimLine - A5010	0008640

#### *Support Equipment:*

Device	Manufacturer	Model #	S/N
Laptop	Dell	Latitude E7240	NA
8-Port Gigabit Desktop Switch with 8-Port PoE	TP-Link	TL-SG1008PE	2159470000322
AC Adaptor	Dell	LA65NM130	NA

### Configuration 2

#### *Equipment Tested:*

Device	Manufacturer	Model #	S/N
Speedway Revolution	Impinj Inc.	IPJ-REV-R220	37016201091
AC Adaptor	CUI, Inc.	SDI50-24-U	NA
Circular Polarized UHF Antenna	Times-7	SlimLine - A5020	NA

#### *Support Equipment:*

Device	Manufacturer	Model #	S/N
Laptop	Dell	Latitude E7240	NA
8-Port Gigabit Desktop Switch with 8-Port PoE	TP-Link	TL-SG1008PE	2159470000322
AC Adaptor	Dell	LA65NM130	NA

## General Product Information:

Product Information	Manufacturer-Provided Details
Equipment Type:	Stand-Alone Equipment
Type of Wideband System:	UHF RFID
Operating Frequency Range:	902-928MHz
Number of Hopping Channels:	50
Modulation Type(s):	ASK
Maximum Duty Cycle:	100%
Number of TX Chains:	1
Antenna Type(s) and Gain:	Circular Polarized UHF Antenna Slimline A5010, 8.5dBiC Circular Polarized UHF Antenna Slimline A5020, 5.5dBiC
Beamforming Type:	NA
Antenna Connection Type:	External Connector
Nominal Input Voltage:	24Vdc
Firmware / Software used for Test:	Impinj Item Test V1.4.1.0

## FCC Part 15 Subpart C

### 15.247(d) Radiated Emissions & Band Edge

#### Test Setup / Conditions / Data

Test Location: CKC Laboratories, Inc. • 22116 23rd DR SE • Bothell WA, 98021 • (425) 402-1717  
 Customer: **Impinj Inc.**  
 Specification: **15.247(d) / 15.209 Radiated Spurious Emissions**  
 Work Order #: **101403** Date: 8/11/2018  
 Test Type: **Maximized Emissions** Time: 11:52:25  
 Tested By: Steven Pittsford Sequence#: 1  
 Software: EMITest 5.03.11

#### Equipment Tested:

Device	Manufacturer	Model #	S/N
Configuration 1			

#### Support Equipment:

Device	Manufacturer	Model #	S/N
Configuration 1			

#### Test Conditions / Notes:

Frequency Range: 9kHz-10GHz (No emissions observed below 30MHz)  
 Frequency tested: 902.75, 914.75, 927.25  
 Firmware power setting: 30dBm  
 EUT Firmware: Impinj Item Test V1.4.1.0.  
 Protocol /MCS/Modulation: Continuously modulated

Antenna type: Circular Polarized UHF Antenna  
 Antenna Gain: 8.5dBiC  
 Antenna in X, Y & Z axis investigated

Duty Cycle: 100%

Test Method: ANSI 63.10 (2013)  
 Bothell Lab C  
 Temperature (°C): 22-25  
 Relative Humidity (%): 37-42

Setup: The EUT is set on a foam test table.  
 The antenna is connected to antenna port 1 via a 1.25-meter RG058 cable  
 A shielded Cat5e is run from the EUT to a gigabit switch located outside the chamber  
 The switch is then attached to the support laptop

### Band Edge Summary – Configuration 2

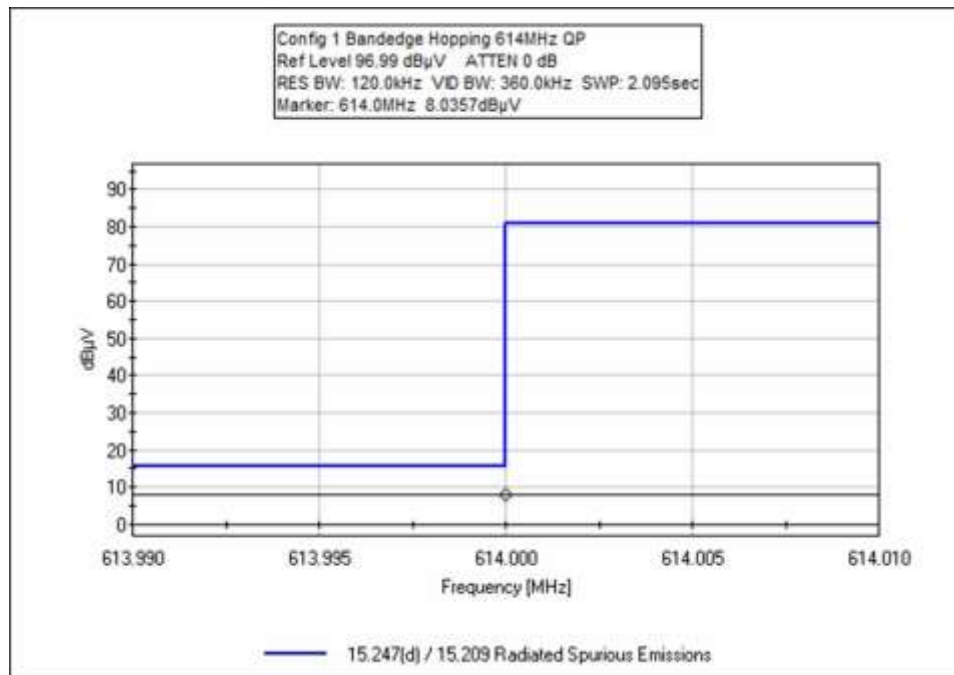

Frequency (MHz)	Modulation	Ant. Type	Field Strength (dBuV/m @3m)	Limit (dBuV/m @3m)	Results
614	ASK	Circular Polarized UHF Antenna Slimline A5020, 5.5dBiC	38.2	<54	Pass
902	ASK	Circular Polarized UHF Antenna Slimline A5020, 5.5dBiC	50.7	<108.2	Pass
928	ASK	Circular Polarized UHF Antenna Slimline A5020, 5.5dBiC	51.5	< 108.2	Pass
960	ASK	Circular Polarized UHF Antenna Slimline A5020, 5.5dBiC	46.1	<54	Pass

## Band Edge Plots

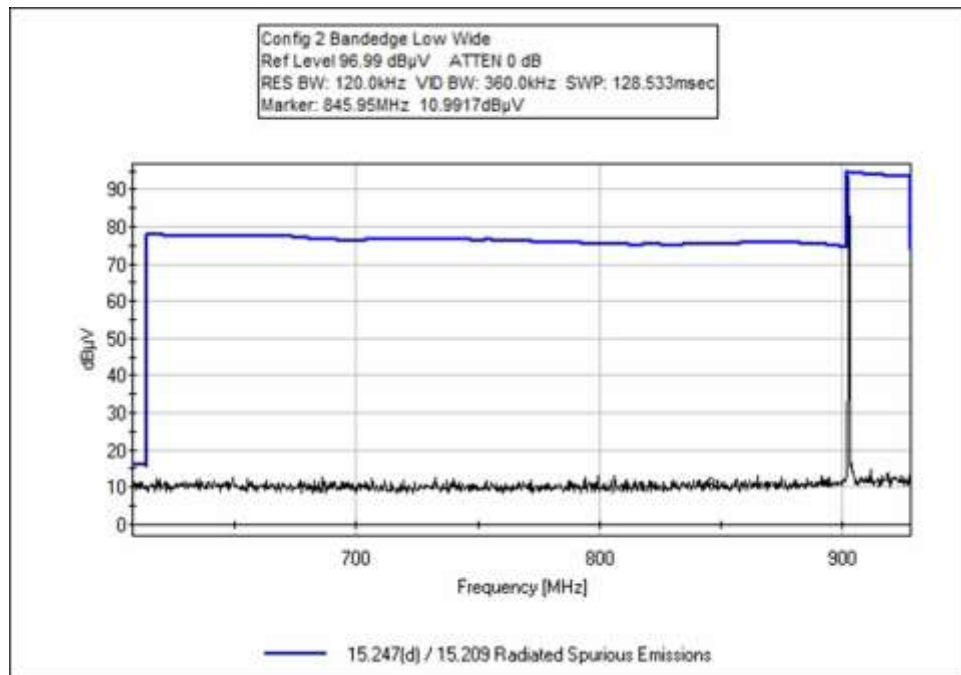

Plots show raw data with the limit line being corrected for all transducers

## Test Setup / Conditions / Data

Test Location: CKC Laboratories, Inc. • 22116 23rd DR SE • Bothell WA, 98021 • (425) 402-1717  
 Customer: **Impinj Inc.**  
 Specification: **15.247(d) / 15.209 Radiated Spurious Emissions**  
 Work Order #: **101403** Date: 8/11/2018  
 Test Type: **Maximized Emissions** Time: 10:43:49  
 Tested By: Steven Pittsford Sequence#: 3  
 Software: EMITest 5.03.11

### Equipment Tested:

Device	Manufacturer	Model #	S/N
Configuration 1			

### Support Equipment:

Device	Manufacturer	Model #	S/N
Configuration 1			

### Test Conditions / Notes:

Frequency Range: 600-1000MHz  
 Frequency tested: 902.75, 927.25 & Hopping  
 Firmware power setting: 30dBm  
 EUT Firmware: Impinj ItemTest V1.4.1.0.  
 Protocol /MCS/Modulation: Continuously modulated

Antenna type: Circular Polarized UHF Antenna  
 Antenna Gain: 8.5dBiC  
 antenna in X, Y & Z axis investigated

Duty Cycle: 100%

Test Method: ANSI 63.10 (2013)  
 Bothell Lab C3  
 Temperature (°C): 22-25  
 Relative Humidity (%): 37-42

Setup: The EUT is set on a foam test table.  
 The antenna is connected to antenna port 1 via a 1.25-meter RG058 cable  
 A shielded Cat5e is run from the EUT to a gigabit switch located outside the chamber  
 The switch is then attached to the support laptop.

## SUPPLEMENTAL INFORMATION

### Measurement Uncertainty

Uncertainty Value	Parameter
4.73 dB	Radiated Emissions
3.34 dB	Mains Conducted Emissions
3.30 dB	Disturbance Power

Uncertainties reported are worst case for all CKC Laboratories' sites and represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of  $k=2$ . Compliance is deemed to occur provided measurements are below the specified limits.

### Emissions Test Details

#### TESTING PARAMETERS

Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

#### CORRECTION FACTORS

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in  $\text{dB}\mu\text{V}/\text{m}$ , the spectrum analyzer reading in  $\text{dB}\mu\text{V}$  was corrected by using the following formula. This reading was then compared to the applicable specification limit. Individual measurements were compared with the displayed limit value in the margin column. The margin was calculated based on subtracting the limit value from the corrected measurement value; a positive margin represents a measurement exceeding the limit, while a negative margin represents a measurement less than the limit.

SAMPLE CALCULATIONS		
	Meter reading	( $\text{dB}\mu\text{V}$ )
+	Antenna Factor	( $\text{dB}/\text{m}$ )
+	Cable Loss	( $\text{dB}$ )
-	Distance Correction	( $\text{dB}$ )
-	Preamplifier Gain	( $\text{dB}$ )
=	Corrected Reading	( $\text{dB}\mu\text{V}/\text{m}$ )

## TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE			
TEST	BEGINNING FREQUENCY	ENDING FREQUENCY	BANDWIDTH SETTING
CONDUCTED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	9 kHz	150 kHz	200 Hz
RADIATED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	30 MHz	1000 MHz	120 kHz
RADIATED EMISSIONS	1000 MHz	>1 GHz	1 MHz

## SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or caret ("^") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

### Peak

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

### Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

### Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point, the measuring device is set into the linear mode and the scan time is reduced.
